

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

A Thickhead apparently allied to *Pachycephala* is regarded as representing a new genus is described as *Coracornis raveni* (p. 157), while a Cuckoo Shrike related to *Malindangia* of the Philippines also becomes the type of a new genus and is named *Celebesia abbotti* (p. 158). The other new forms are, *Caprimulgus affinis propinquus* (p. 155); *Collocalia vestita aenigma* (p. 156); *Rhamphococcyx centralis* (p. 156); *Lophozosterops striaticeps* (p. 157); *Cataponera abditiva* (p. 158); and *Cryptolopha nesophila* (p. 158).—W. S.

**Oberholser's 'Mutanda Ornithologica V.'**—This<sup>1</sup> is the fifth of a series of papers which Dr. Oberholser has been issuing calling attention to necessary changes in the nomenclature of birds in various parts of the world. The species here treated are all Woodpeckers. *Iyngipicus pygmaeus* (Vig.) he shows must hereafter be known as *Yungipicus mitchellii* (Mahl.), the specific name being preoccupied and the generic name not following the original spelling. *I. auritus* (Eyton) becomes *Y. moluccensis* (Gmel.), the latter specific name being earlier. *Dendropicos minutus* (Temm.) is preoccupied and is renamed *D. elachus* (p. 8) while *Campethera punctata* (Valencien.) becomes *C. punctuligera* (Wagl.), for the same reason. *Gecinus striolatus* (Blyth) is in like case and becomes *Picus xanthopygius* (Bonap.), *Gecinus* giving way to *Picus* as explained by Hartert (Vogel Palaarkt. Fauna VII p. 889).—W. S.

**Miller's 'Birds of Lewiston-Auburn and Vicinity.'**—Well prepared local lists have a very definite value and when they are prepared in a way to help the bird student their value is doubled. Such a list is Miss Miller's well printed brochure on the birds of Lewiston-Auburn, Maine.<sup>2</sup> It consists of notes on 161 species which have been observed in recent times in the region covered, together with 40 additional species of water birds seen by others in the vicinity. Not only is the nature of the occurrence and relative abundance of each species in the main list given, but there are interesting accounts of their habits from personal observation and appropriate quotations from standard works and popular writings on nature, which make the text attractive and readable. Preliminary pages treat of the bird-life of the four seasons and there are some supplementary suggestions to bird students and a table of migrants in the order of their spring arrival. The dedication is to Prof. J. Y. Stanton at whose suggestion the list was prepared and who "was the author's inspiration in all her bird study." His death occurred while the work was in press and the addition of the portraits makes it in a measure a memorial to him. We might call attention to the fact that this excellent list does not contain a
